

P R O D U C T S

Alabaster pieces specially designed for **architecture, interior design** and other **indoor** and **outdoor** applications.

Tiles (cut to size)

In **ARASTONE** we have **different formats** that adapt to any surface according to the type of project and its application. Taking into account the design, size, color, thickness, shape and technical specifications.

The great translucency of some of our varieties gives us the possibility of using alabaster as **glass in doors, windows and cladding for ceilings or walls**.

It allows interior and exterior glazing with minimum thicknesses of 7mm (depending on sizes).

Its combination with multiple materials produces an **excellent aesthetic effect**.
